

"Feed It To The Worms": A Vermicomposting Geographic Curriculum

What is it?

An exciting new core curriculum for grades 1-6. By maintaining a composting bin in the classroom, teachers can participate in an innovative program that helps students learn about our environment, **while allowing teachers to meet national curriculum standards in geography, math, language arts and science.** Using fun hands-on activities, students learn about the vital importance of practicing stewardship of our natural resources.

How is it structured?

This complete curriculum is in two grade sets: 1-3 and 4-6. The video ("Learning From Worms") is included in this package, and provides examples of working with the curriculum in classrooms. It shows how simple the program is, as well.

How much does it cost?

Non-profit cost: ~~\$50~~ **\$40** (Moving Sale Price!)

This amount covers production and shipping of the curriculum and video only

Bins, scales and worms may be purchased separately

[Created by the New Hampshire Geographic Alliance and Impact Earth in partnership with the EPA and Nat'l Geographic Society.
This curriculum has been teacher-tested in a range of grades.]

This Curriculum is available now! To order, fill out the form below. Please contact us for more information on your order, or if you are interested in local vermicomposting workshops.
